

# ER-to-Relational Mapping Algorithm

## Step 1: Mapping of Regular Entity Types.

### EMPLOYEE

<u>Fname</u>	Minit	<u>Lname</u>	<u>Ssn</u>	Bdate	Address	Sex	Salary
--------------	-------	--------------	------------	-------	---------	-----	--------

### DEPARTMENT

<u>Dname</u>	<u>Dnumber</u>
--------------	----------------

### PROJECT

Pname	<u>Pnumber</u>	Plocation
-------	----------------	-----------

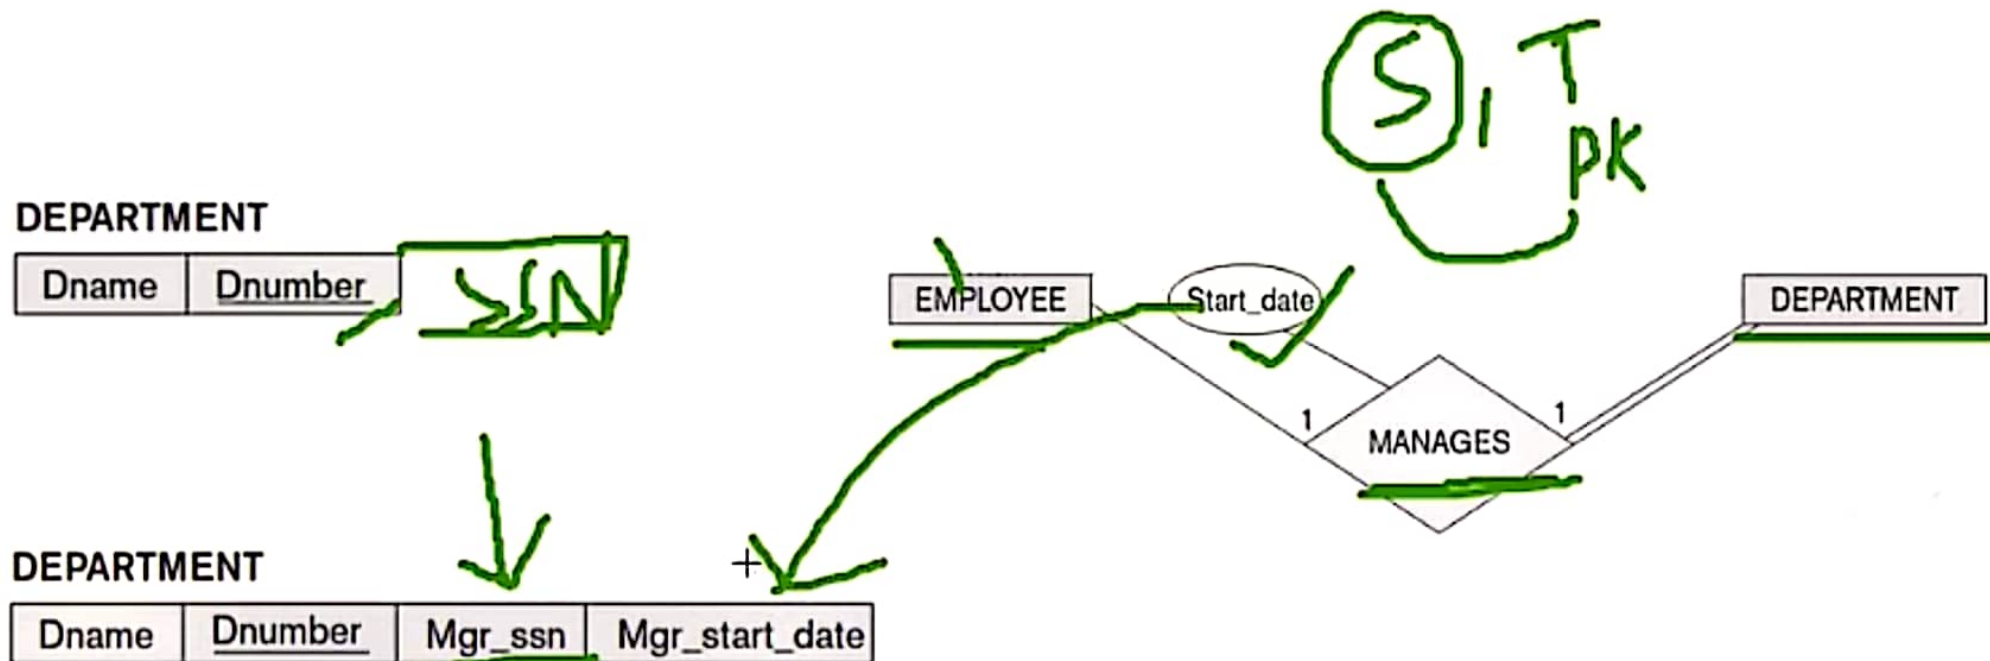

# ER-to-Relational Mapping Algorithm

## Step 2: Mapping of Weak Entity Types

# ER-to-Relational Mapping Algorithm

## Step 3: Mapping of Binary 1:1 Relation Types

# ER-to-Relational Mapping Algorithm

## Step 4: Mapping of Binary 1:N Relationship Types.

EMPLOYEE

Fname	Minit	Lname	<u>Ssn</u>	Bdate	Address	Sex	Salary
-------	-------	-------	------------	-------	---------	-----	--------

EMPLOYEE ✓

Fname	Minit	Lname	<u>Ssn</u>	Bdate	Address	Sex	Salary	<u>Super_ssn</u>	<u>Dno</u>
-------	-------	-------	------------	-------	---------	-----	--------	------------------	------------

Handwritten annotations: A green arrow points from the 'Salary' attribute of the first EMPLOYEE table to the 'Super\_ssn' attribute. Another green arrow points from the 'Dno' attribute to the 'Super\_ssn' attribute. A green line is drawn under 'Super\_ssn' with 'FK' written below it.

PROJECT

Pname	<u>Pnumber</u>	Plocation
-------	----------------	-----------

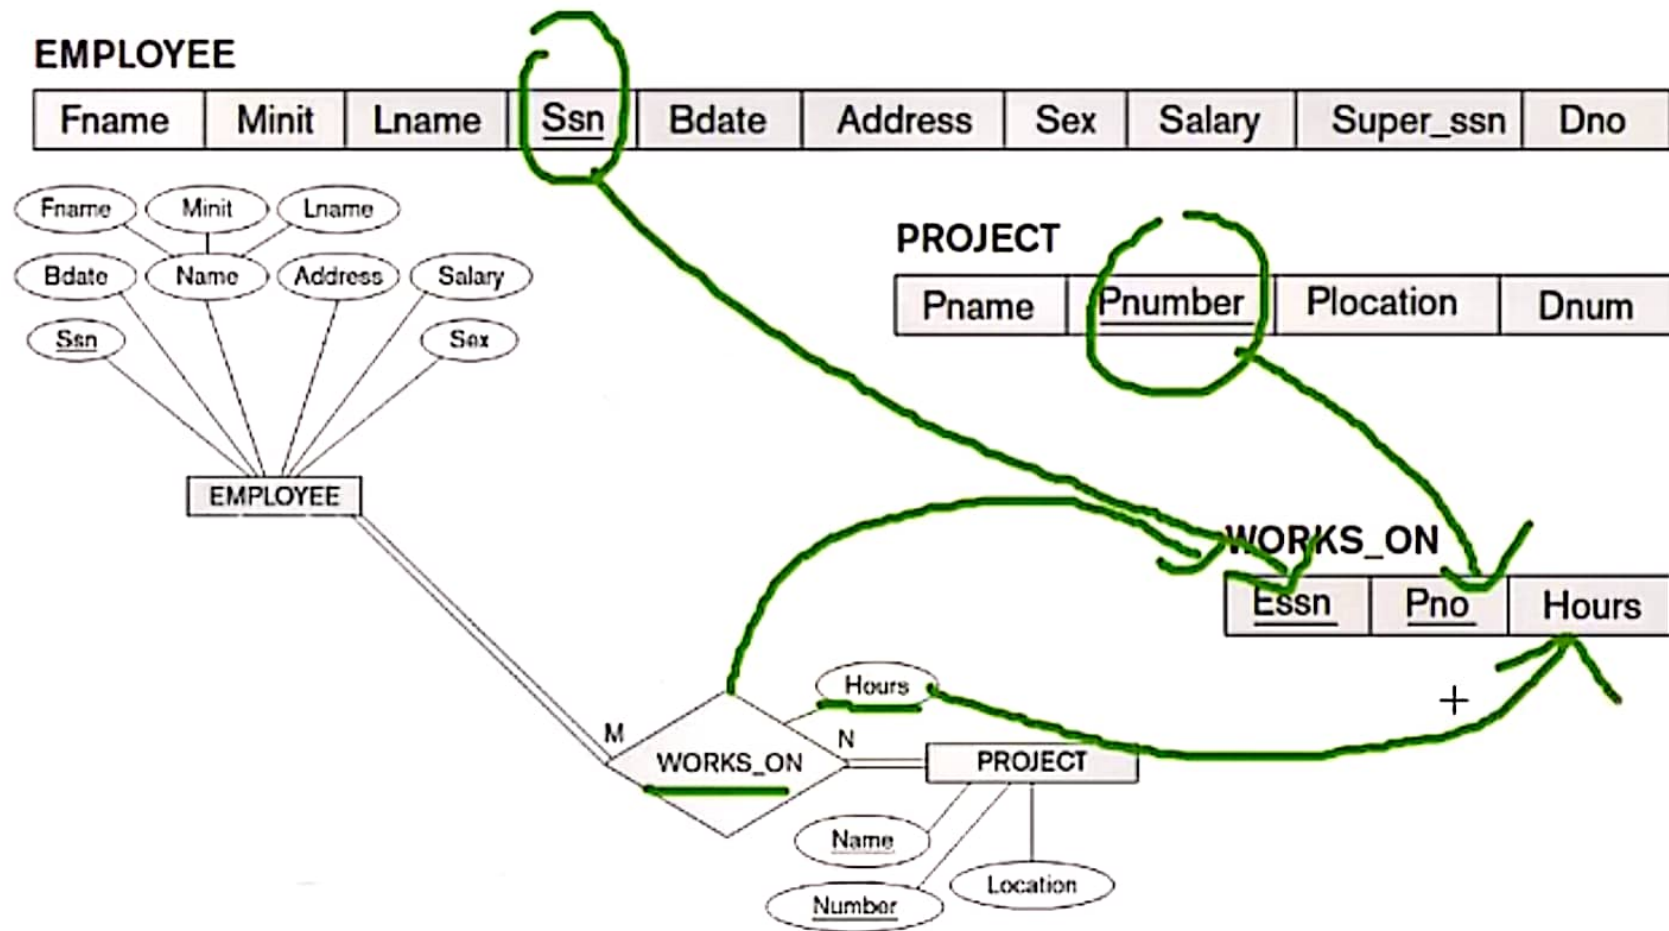

PROJECT

Pname	<u>Pnumber</u>	Plocation	Dnum
-------	----------------	-----------	------

Handwritten annotations: A green arrow points from the 'Dnum' attribute to the 'Super\_ssn' attribute of the second EMPLOYEE table. A green 'FK' is written below the 'Dnum' attribute.

# ER-to-Relational Mapping Algorithm

## Step 5: Mapping of Binary M:N Relationship Types.

# ER-to-Relational Mapping Algorithm

## Step 6: Mapping of Multi valued attributes.

Result of mapping the  
COMPANY ER schema  
into a relational database  
schema.

mapping steps. We assume that the mapping will create tables with simple single-valued attributes. The relational model constraints defined in Chapter 5, which include primary keys, unique keys (if any), and referential integrity constraints on the relations, will also be specified in the mapping results:

**Step 1: Mapping of Regular Entity Types.** For each regular (strong) entity type  $E$  in the ER schema, create a relation  $R$  that includes all the simple attributes of  $E$ . Include only the simple component attributes of a composite attribute. Choose one of the key attributes of  $E$  as the primary key for  $R$ . If the chosen key of  $E$  is a com-
